FY2024 performance review

UniSweet Leadership and Finance Business Partners
Prepared from Sales, P&L and Market data | FY2024 versus FY2023

This pack is built to be read without me. Every slide states its conclusion in the title, and the reasoning sits underneath it.

Source: outputs/sales_master.csv, P&L Table.xlsx and Market Report MAT Nov'24.xlsx

Profit rose, but the business did not get healthier

PBO improved because cost fell faster than Gross Profit—not because growth recovered.

Topline and share fell; lower spend alone protected PBO.

Restore profitable growth without giving back the protected profit.

How bad is it? → Did the market do this to us? → Where exactly did it break? → Why did PBO still rise? → What is left to grow?

I am leading with the conclusion rather than walking you through the analysis. The six charts that follow are evidence for that one sentence.

Source: outputs/sales_master.csv, P&L Table.xlsx and Market Report MAT Nov'24.xlsx

Every topline KPI moved against us in FY2024

FY2024 versus FY2023

Three KPIs, three adverse moves — and the discount rate made the last one worse.

TURNOVER	GROSS SALES VALUE	DISCOUNT % OF TURNOVER
€270.5m	**€349.2m**	**29.11%**
-19.6m	**-22.3m**	**+103bps**
-6.7% YoY	-6.0% YoY	from 28.08%

Turnover fell faster than GSV because discount intensity rose at the same time - the base shrank and we kept less of what was left.

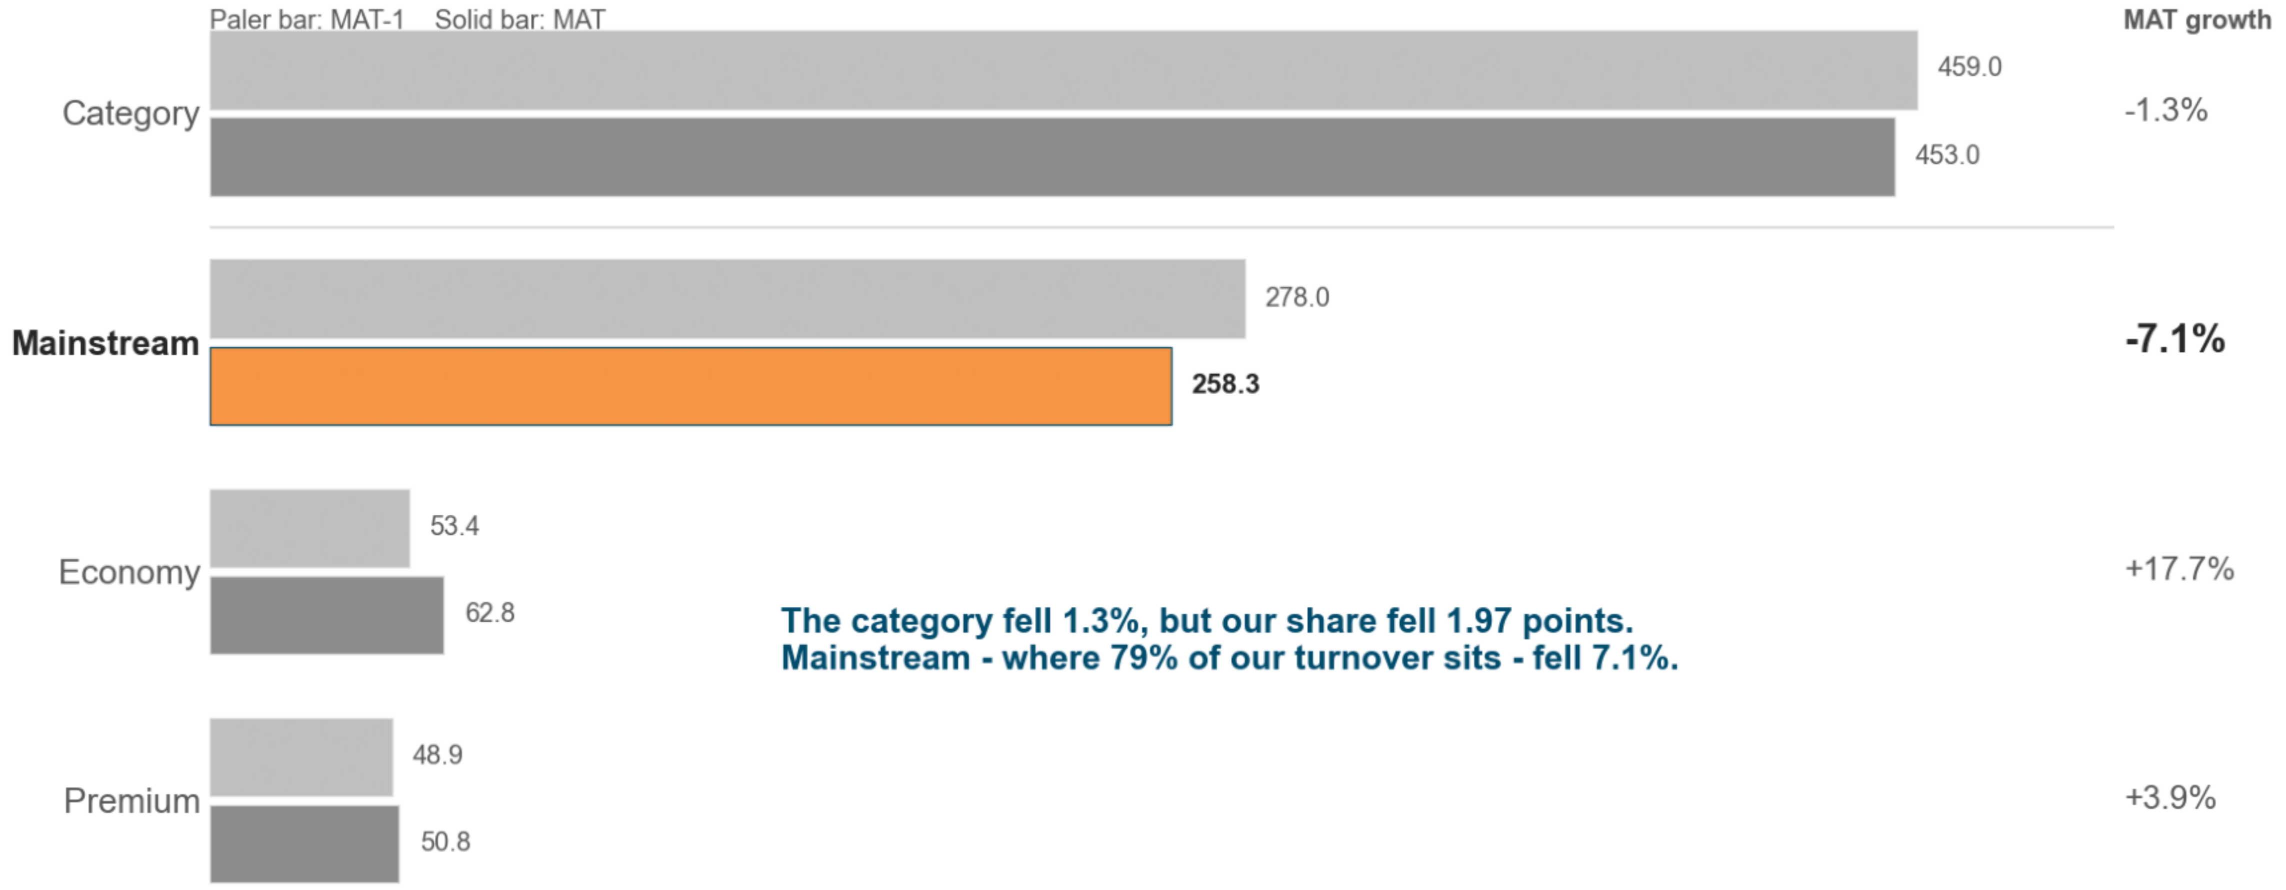
Turnover fell €19.6m and GSV €22.3m. Turnover fell the faster of the two because discount on Turnover rose 103bps at the same time.

Source: P&L Table.xlsx and outputs/sales_master.csv | Discount is stated on Turnover, the P&L convention; on GSV the same movement reads 21.93% to 22.55% (+62bps)

The category barely moved; Mainstream is where the value went

Market sales value, EURm | MAT Nov'24 versus MAT-1

No. The category fell 1.3% and we fell 4.3% — the gap is ours to explain.



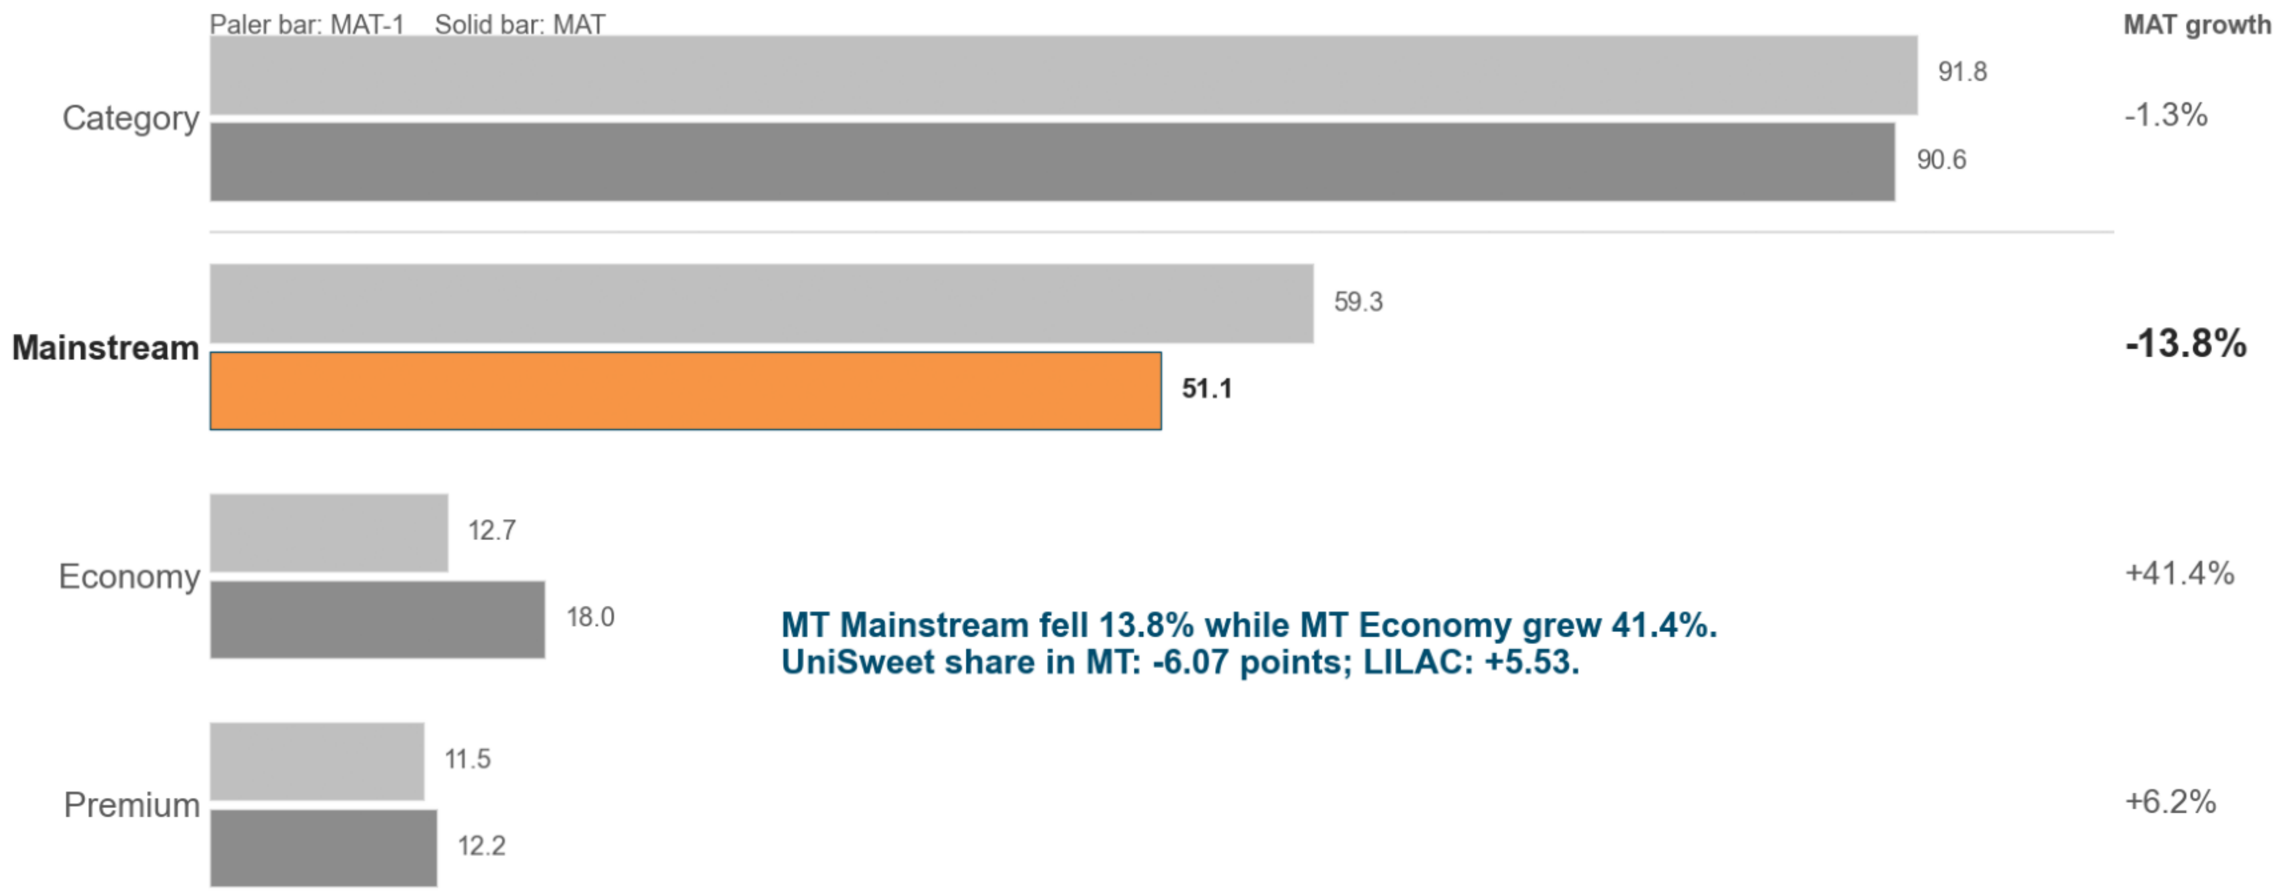
Economy grew 17.7% and Premium 3.9%. The decline is Mainstream, which is where 79% of our turnover sits, and where we gave back 2.98 share points.

Source: Market Report MAT Nov'24.xlsx | Segment rows sum the named brands only, which cover 82.9% of Category; Category is the file's own total, not their sum

In Modern Trade the same category decline cost us six share points

Market sales value, EURm | Modern Trade only

Modern Trade. Same category decline, six times the share loss.



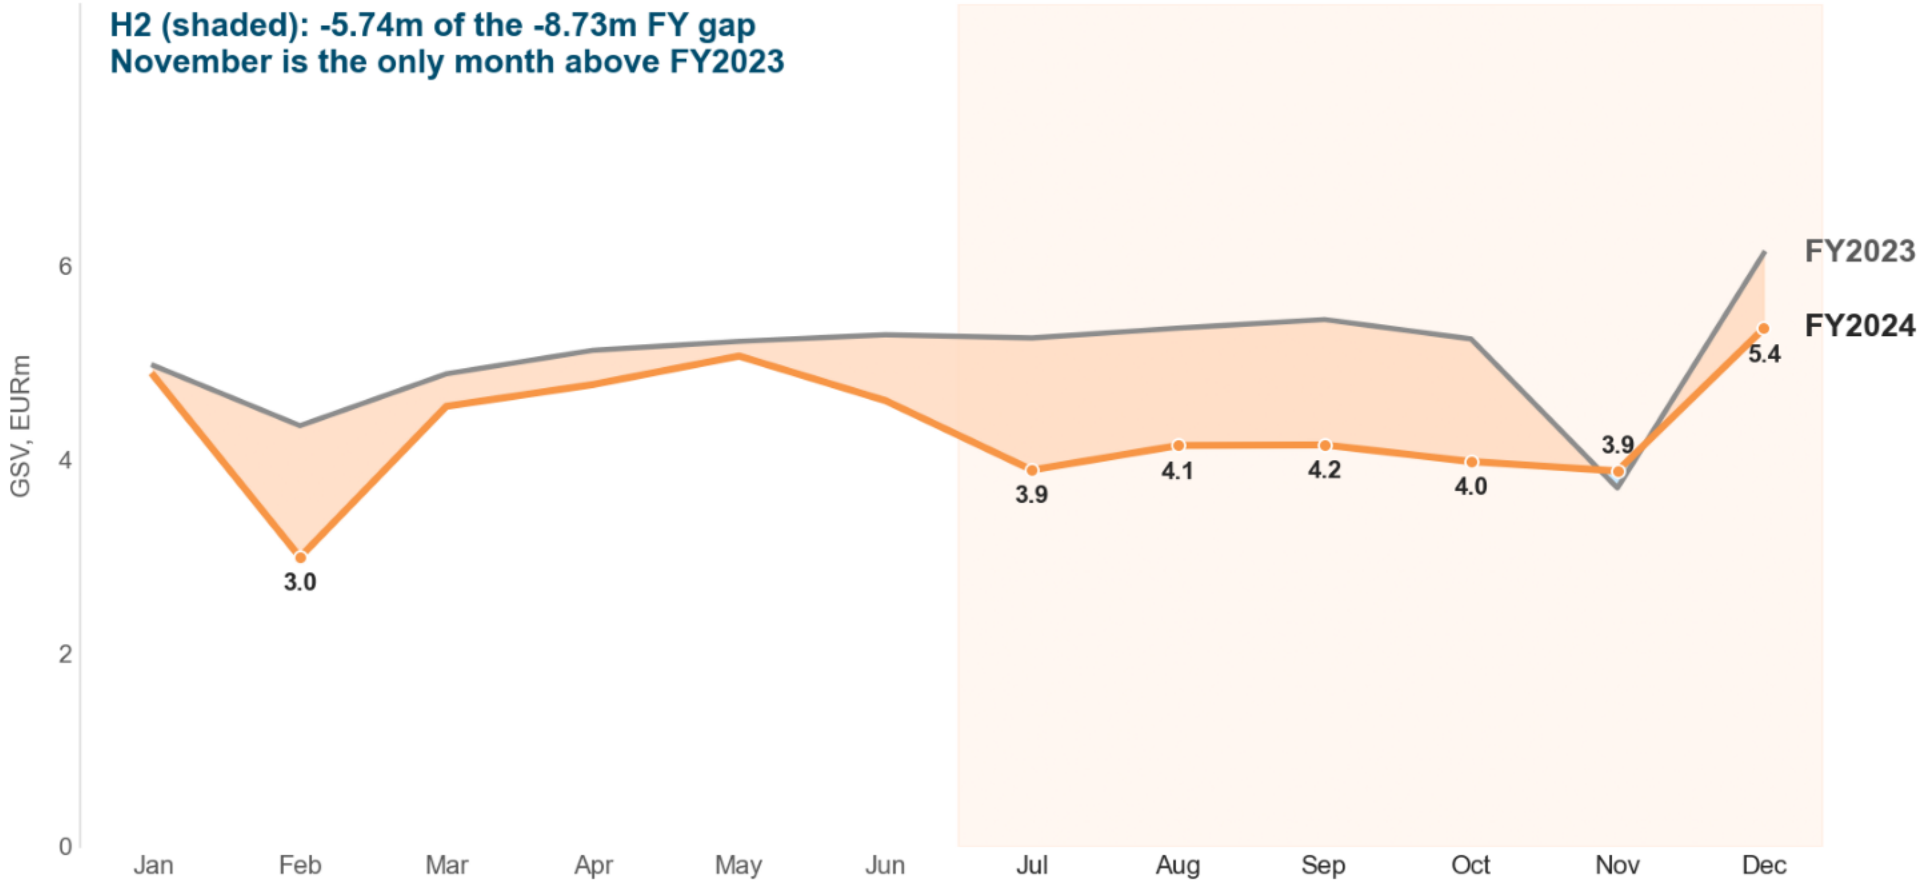
MT Mainstream fell 13.8% while MT Economy grew 41.4%, most of it LILAC at +5.53 points. DT lost only 0.28 share points against MT's 6.07.

Source: Market Report MAT Nov'24.xlsx | Category growth is identical (-1.3%) at Total, DT and MT - the source scales it proportionally, so this row repeats page 2 by construction

OLIVE in MT lost €8.73m of GSV, two thirds of it after June

OLIVE gross sales value in Modern Trade, EURm per month

A second-half problem in one brand and one channel — which narrows the fix.

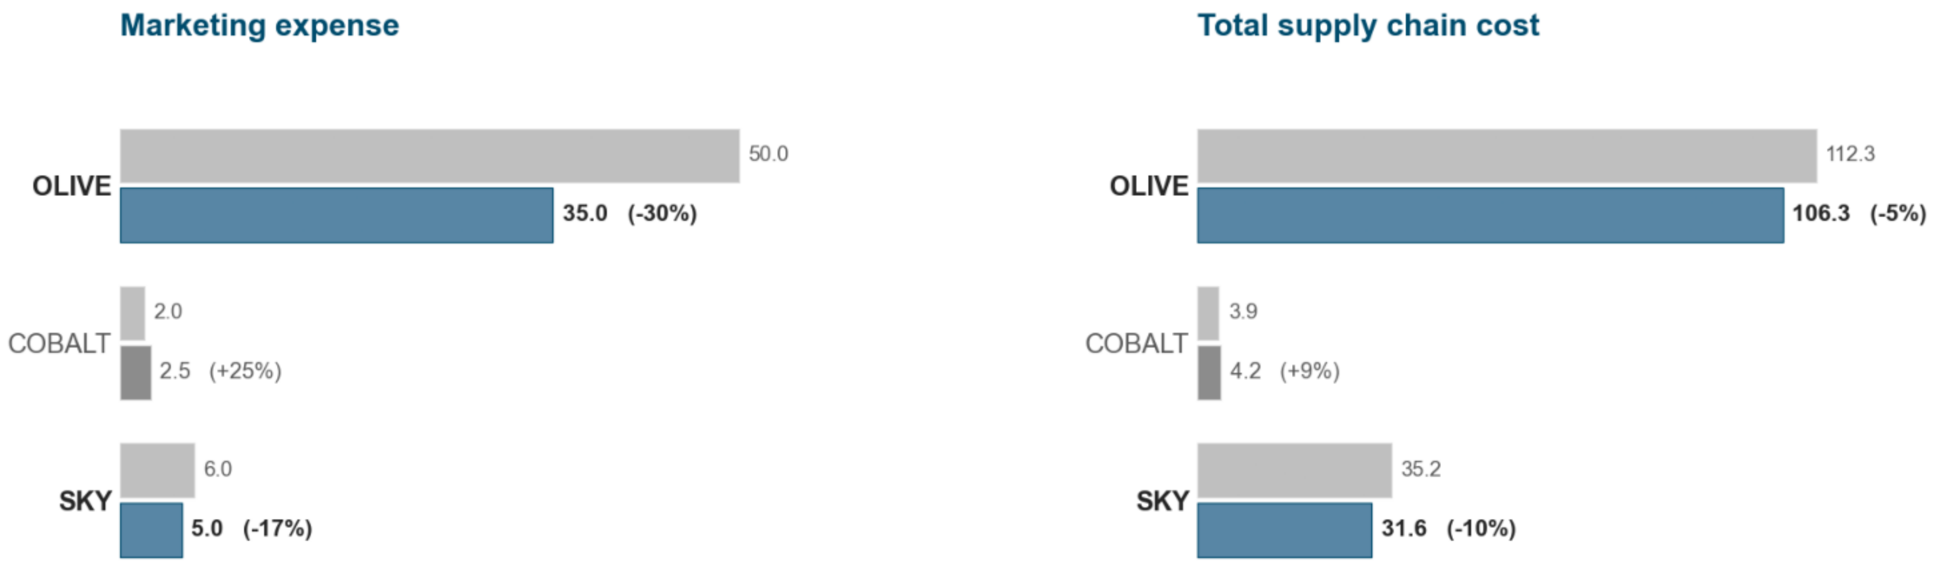


H1 was down €2.99m, H2 down €5.74m. November is the only month above FY2023. Monthly sell-in does not by itself establish seasonality.

Profit held because we spent less, not because we sold more

Marketing expense and total supply chain cost, EURm

PBO protection is cost-led. It is repeatable once, maybe twice.



€15.5m less marketing and €9.3m less supply chain cost more than covered the €10.3m of Gross Profit lost - PBO rose 6.4% on cost alone.

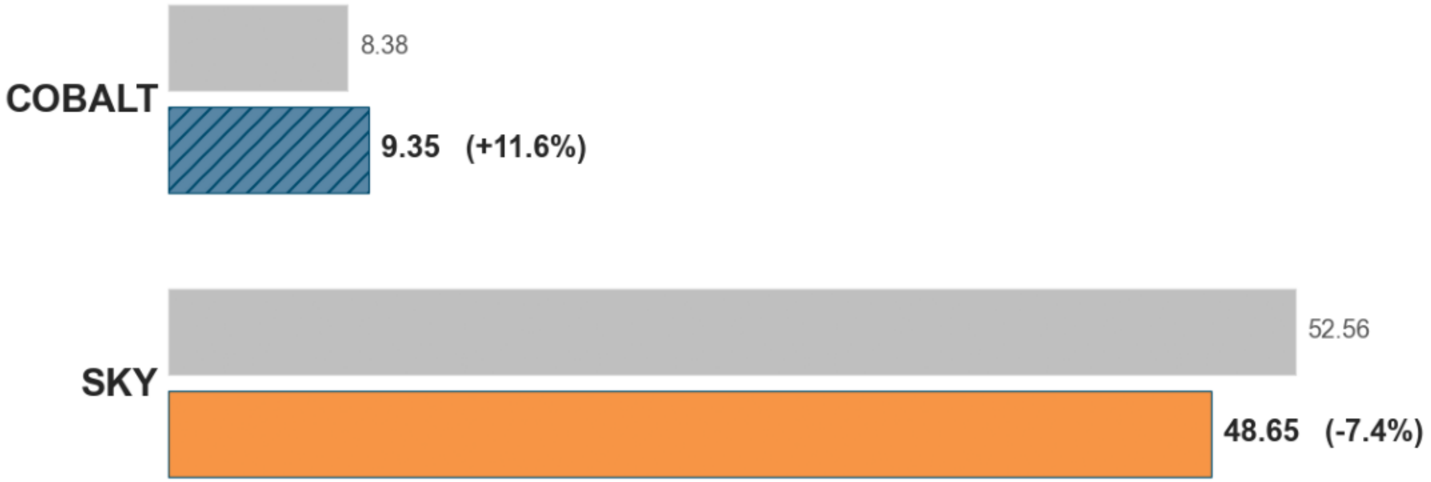
That lever cannot be pulled twice: supply chain cost per euro of Turnover worsened 35bps, so the saving is a smaller base, not efficiency.

OLIVE marketing fell 30% and supply chain 5%. Supply chain cost per euro of Turnover still worsened 35bps, so this is a smaller base, not efficiency.

COBALT is compounding; SKY is losing sell-in into a market that grew 23.8%

Turnover, EURm | Against each brand's own market

One brand to scale on evidence, one to diagnose before funding.



COBALT | market +3.9%, share +0.56pp

Sell-in and market move together.
Scale it - once incremental PBO is proven.

SKY | market +23.8%, share +0.45pp

Sell-in and market move apart.
Diagnose it before funding it.

COBALT grew 11.6% against a market up 3.9% and gained 0.56 share points. SKY fell 7.4% while its market grew 23.8% — reconcile that before spending.

Source: P&L Table.xlsx and Market Report MAT Nov'24.xlsx | Internal Turnover is FY sell-in; market value is MAT Nov'24 sell-out - different periods and different measures

Approve the three week-0 gates today

Restore profitable growth without giving back the protected PBO.

ACTION 1 · SALES HEAD

Approve the OLIVE × Modern Trade recovery baseline and its customer × SKU economics, weeks 0-2.

ACTION 2 · SALES HEAD

Approve classifying trade spend into keep, test, redesign or stop before any budget is restored.

ACTION 3 · FINANCE HEAD

Agree scale funding is released only after positive incremental Gross Profit — COBALT first, SKY only after diagnosis.

IF WE DO NOTHING

The marketing lever cannot be pulled twice; FY2025 PBO carries the full topline decline.

Each action has a first gate rather than a budget, so the decision today is to start, not to spend. Owners are named and the KPIs are already defined.

Sources, definitions and what this analysis does not claim

INTERNAL SALES

outputs/sales_master.csv — merged from the raw Sales and mapping workbooks; FY2024 versus FY2023, all rows retained so GSV, Discount and TO tie to P&L

P&L

inputs/pnl/P&L Table.xlsx, sheet 'PnL table'. Marketing and supply chain cost are stated assumptions in that workbook, not measured spend

MARKET

inputs/market/Market Report MAT Nov'24.xlsx, sheet 'Market Data'. MAT Nov'24 versus MAT-1 sell-out — a different clock from the internal FY sell-in figures

TWO LIMITS WORTH STATING

Segment rows sum the named brands only (82.9% of Category at Total, 90.9% at MT). Category growth is identical at Total, DT and MT because the source scales it proportionally.

NOT CLAIMED

Discount movement is not promotion causality. Lower absolute cost is not efficiency. SKY's internal/market divergence is a question, not a conclusion.

These are the qualifications I would give verbally. They are written down because this pack will be read by people I cannot qualify it for in person. Every chart has a matching CSV in outputs/report_visuals/data/.
