Case Study: Performance Strategy Reset to Reignite the Confectionery Growth

Business Context

UniSweet is a global Confectionery Business. Despite its continued position as a market leader, the business has entered a period of structural performance deceleration, requiring a deliberate reset in local performance strategy. You will assume the strategic Performance Management role within the Finance Business Partner Team, responsible for translating complex performance data into actionable insights for business partners and senior leadership. Your focus is to evaluate performance effectiveness, refine value-driving metrics, and surface key risks and growth opportunities for the future.

Your Task

You have been tasked with leading the preliminary analysis for the upcoming Monthly Leadership Meeting, where the Boards will review overall business and financial performance and align on actions to strengthen business results. Drawing on inputs from key partners, you have consolidated and analyzed market insights, sales trends, and financial data. Based on this analysis, you are required to develop a clear, insight-driven presentation for senior leadership, highlighting key performance implications and proposing strategic recommendations.

1. Market Analysis: Leveraging the Nielsen market report provided by your Consumer & Market Insights partners (available in the "Market Data" folder), conduct a strategic assessment of the market landscape. Your analysis should evaluate key market dynamics, trends, segmentation shifts, and other critical factors shaping the Confectionery category's growth outlook.

2. Sales Analysis: Utilize the sales data extracted from internal systems and provided in the "Sales Data" folder. Your task is to transform the raw data into a report using Excel or Power BI. Through your analysis, assess underlying sales trends, overall sales performance, and Discount % Turnover (Discount = GSV - TO) across brands, products, channels, and customers. All sales figures are reported in kEUR, applying an exchange rate of 26723 EUR/VND.

3. Financial Analysis: Calculate and analyze the key metrics outlined in the "P&L Table" folder to assess overall financial performance for 2023 and 2024, reported in both kEUR and mVND. Your analysis should include a Year-on-Year (YoY) performance comparison.

4. Strategy Recommendation: Based on your analysis, develop recommendations to address performance gaps and define 03 strategic actions to improve the overall business performance.

Submission Guides

Deadline: **EOD Thursday, 21st May 2026**

Submission to email: **Tran-Thanh.An@unilever.com**

Subject title: **[SEO-V] FBP Intern Case Study – [Name]**

Your proposal should be presented in English, at maximum 3-4 pages for slides (PDF format) and/or 01 offline Excel file (non-inclusive of introduction/opening/closing).
